

Project location: Kuwait  
Year: 2010

### The Challenge

High profile clients and environments are the ultimate test for PSIM software. Our client's application was a government agency and parliament building in the Middle East. The challenge was to unify the existing systems while at the same time improving the overall security and efficiency. Focus was mainly on protecting human life in case of an assault attempt or disaster and to improve the buildings environmental footprint. WinGuard is the perfect solution: It creates automatic workflows for various hazardous situations. In addition, the security-related system information is used to help increase energy efficiency.

### Integration

- Avigilon – Video Management
- Nice – Video Management
- Commend – Intercom
- Sicurit – Perimeter Protection
- ACIC – Video analytics
- Building Management System
- Eyevis – Video Wall Management
- SNMP – Network surveillance

### Benefit

- Easy operation through unified user interface
- Guided workflows for various situations
- Centralized information
- Local/centralized operation of all connected systems
