

Project location: Luxembourg
Year: 2004

The Challenge

A parking garage chain in Luxembourg was searching for a solution to monitor three parking garages at different locations via a uniform control center. Depending on the location of each parking garage as well as on the time of day there are different frequencies and surveillance cycles by the local personnel. WinGuard is flexible to switch between local and/or centralized surveillance so that in case of a fire alarm or a cashier breakdown the necessary measures are initiated, as every connected system can not only be visualized but also fully controlled.

Integration

- Honeywell - Fire Alarm System
- OPCClient - PLC
- Commend - Intercom
- ModbusIP - PLC
- Scheidt & Bachmann – Barrier and cashier control
- Geutebrück - CCTV
- Bosch - CCTV

Benefit

- Local or centralized surveillance and control of several parking garages
- Display of all information in real time
- Centralized data management
- If necessary immediate notification of local responsables via SMS, call or e-mail
