

Project location: Germany
Year: 2007

The Challenge

A data center in which decentralized company locations are consolidated and at the same time external IT services are used intended to ensure high availability as well as the protection of data privacy. WinGuard not only ensures that only authorized persons access the center but also monitors the emergency power supply and climate control as well as fire protection and intrusion detection systems. In addition WinGuard offers redundancy concepts (System Manager as well as Hot-Standby for five locations) so that a comprehensive solution to guarantee the reliability of data centers is realized.

Integration

- Minimax - Fire Alarm System
- Intellex – Video Matrix
- American Dynamics – Video Management
- Seetec – Video Management
- Honeywell - Intrusion detection
- C•CURE 9000 - Access control
- Feldhaus-Uhlenbrock - Perimeter protection
- Honeywell (Esser) – Fire-/Intrusion detection

Benefit

- Centralized surveillance of data security
- High availability by redundancy concepts
- Integration of building control systems
- Increase of energy efficiency
