Vendor-neutral PSIM: Advancis offers its integrated solution WinGuard

Advancis presents most recent WinGuard version at IFSEC, 2017, taking place in a live control centre environment for visitors and spectators.

Advancis has now released the most recent version of WinGuard. The current release includes numerous innovations in event handling, camera visualization, network functionality and more.

As an option, it is now possible to group or completely hide events, either manually or depending on pre-defined criteria. The use of column definitions enables to freely define content, display and sorting of the event list. The event list can be filtered individually by the user.

In addition, with regard to camera visualization, the current view field of the cameras connected to WinGuard can be visualized graphically as an overlay at the camera symbol, provided that the interface supports transmission of PTZ status information. Using overlay definitions, the contents for labelling of video images can be freely defined.

Furthermore, the most recent WinGuard release offers improved network functionality. Replication in the network has been optimised. The Hot Standby switchover time in systems with numerous clients has been significantly reduced. In case of changes of the workstation configuration, e.g. adding of a new client, a re-start is not required.

Finally, with the help of timers, procedures within the scope of event processing can be monitored with regard to time and notifications can be pre-defined. For creation of texts and workflows as well as for selected entry fields, automatic spellchecking is available.

These new features facilitate working with WinGuard even more, so that the user in the control centre can efficiently control all technical systems installed in the building via the uniform WinGuard user interface.

Of course, all innovations will be presented in a live control centre environment at IFSEC in London – visit Advancis at booth no. G1100.

About Advancis

More than 20 years of experience, over 1,200 realised installations in different application sectors, worldwide representations and numerous certified integration partners make Advancis one of the international market leaders in vendor-neutral PSIM (Physical Security Information Management).

Founded in 1994 as a regional software manufacturer, the company pioneered with regard to cross-domain security management. From the very beginning, vendor-neutrality has been the decisive advantage of the WinGuard system, as the total security, building, communication and IT infrastructure can be integrated in WinGuard.

The user in the control centre able to detect all situations in the surveilled building or perimeter in an optimal manner, being efficiently supported in event processing by WinGuard.

The formula for success is the continuous development of WinGuard by innovative ideas, directly at the Advancis headquarters in Germany (Langen/Frankfurt, Germany). Customer requirements are, therefore, efficiently realized.
