VERTICAL SOLUTION
RETAIL

winguard
always retain control

THE SYSTEM CONCEPT

WINGUARD IS THE INTEGRATED SOLUTION FOR AUTOMATION AND SECURITY TECHNOLOGY

The Challenge

Nowadays, safety officers in retail chains are facing a difficult challenge: Efficiency and overall security shall be increased while budgets are constantly being reduced.

- Cost reduction by centralizing and optimizing personnel resources

- Ensuring of the overall security with an easy to use system

- An intelligent and flexible security management system for information handling

Centralization is part of the perfect solution. WinGuard collects and processes information from different systems such as fire and intrusion alarm systems, cashier systems, video monitoring, access control as well as RFID systems, and provides it put into graphs for the user.

In addition, the complete building management technology incl. heating, climatization and lighting can be integrated into the overall system. Only the relevant information is forwarded to the user so that he focuses on the important situations, allowing him to immediately initiate the appropriate measures.

If required, WinGuard is continuously monitoring the trouble-free operation of all installed technical devices so that e.g. temperatures of cooling chambers are monitored by the system. In case of a deviation from configured nominal values, WinGuard automatically initiates countermeasures.

**Integration of all technical systems into one easy-to-use platform**

Legally compliant documentation and comprehensive reporting possibilities

Intelligent security and building management system

Information available centrally

WinGuard – integrated security management and comprehensive information handling for the retail sector.

The overall Solution for all Stores

The mission control center as well as a service technician is automatically informed by SMS, e-mail or by phone. With its high flexibility, WinGuard ensures that all processes and the graphic user interfaces are perfectly adapted to the given requirements.

- Replication of standard procedures by automatic, system encompassing actions in order to discharge the user

- Transfer of automatic actions into all chain stores, incl. surveillance and complete logging of all measures

- The user receives relevant information as well as recommended measures to solve the situation

- Specific interfaces to integrate all subsystems into the overall solution

This is how each chain store can be monitored in parallel, locally and/or by the central mission control center. During off-times, all connected chain stores are completely monitored by the mission control center. All information is collected here.

In case of an incident well-directed countermeasures are initiated since each connected system is not only visualized, but can also be fully controlled centrally.

The open architecture of WinGuard allows for a future easy integration of further locations and subsystems. WinGuard offers a homogenous system which is specifically adapted to the customer requirements. High possible savings are provided by centralization combined with additional benefits for the user.

WinGuard – integrated security management and comprehensive information handling for the retail sector.
