

# Unify and simplify your Identity Management.

With **AIM** from Advancis

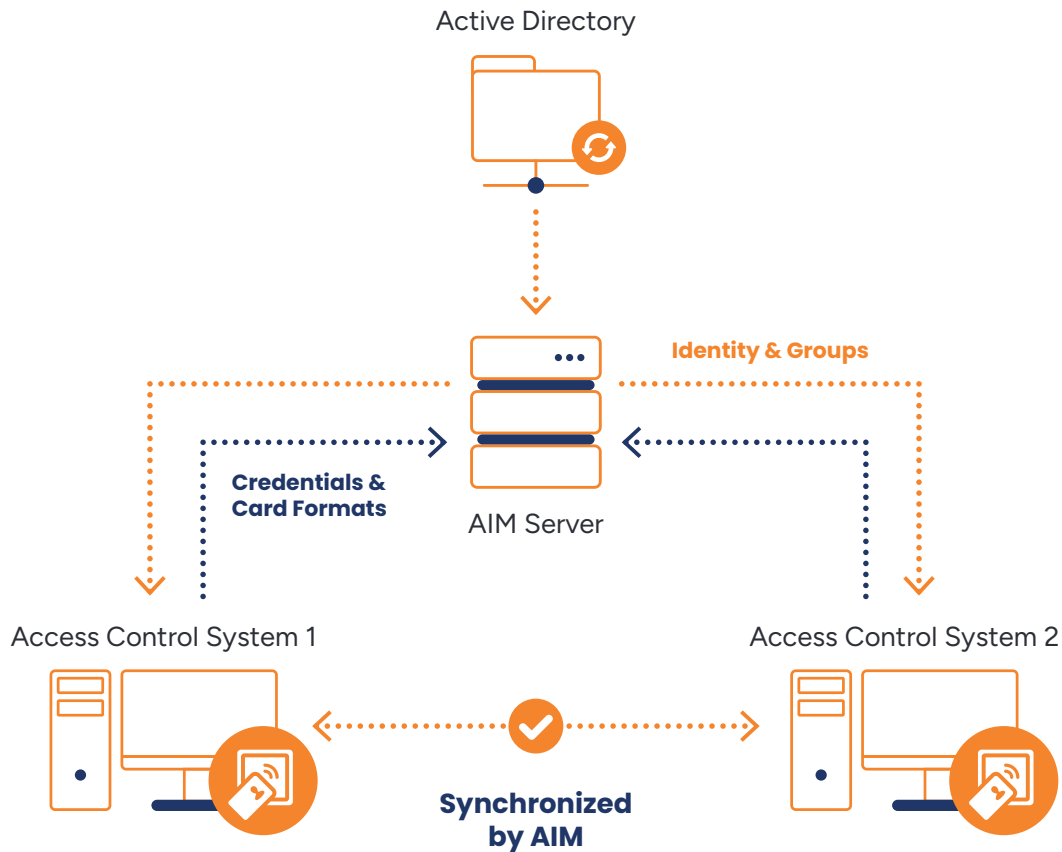

- ✓ **Integrated Access Control**
- ✓ **Unified Credential Management**
- ✓ **Centralised Authorisation Models**
- ✓ **Seamless Migration Possibilities**
- ✓ **Automated Compliance**

The Advanced Identity Manager (AIM) from Advancis offers a new software solution for integrating multiple disparate access, identity, and biometrics systems all in one application.

AIM ensures that the logical and physical access privileges associated with a person's identity or role are always synchronized across both IT and security systems.

With AIM, identities and credentials from disparate access control systems are synchronized seamlessly. The AIM Mobile App enables credentials from different manufacturers to be used and managed in a unified way, eliminating the need to carry multiple access cards or badges.

## AIM System Schematic

# Synchronize access rights across the Enterprise.

Get more  
information  
about AIM.

AIM enables you to continue using the existing access control infrastructure without having to forego the benefits of standardized processes and centralized data maintenance.

AIM web user interface provides a unified overview of the synchronization status of all connected systems. This also facilitates removal and off boarding of terminated employees centrally, ensuring all access cards and clearances can be updated, disabled or removed properly.

AIM helps organizations significantly reduce or even eliminate the risk of unauthorized access to buildings and critical assets.
