

Unify and simplify your Identity Management.

With **AIM** from Advancis

- ✓ **Central identity management**
- ✓ **Physical and logical**
- ✓ **Role-based access control**
- ✓ **Seamless Integration**
- ✓ **Automated workflows**

AIM, short for Advanced Identity Manager, is a PIAM solution that centralizes physical and digital identity management. It connects and integrates your physical environment, including Access and Workplace Management solutions.

Whether onboarding new employees, granting secure access or managing authorizations for visitors and external companies, it simplifies the management of your access control by automating approval processes, standardising authorisation models and managing your internal and external identities in one user-friendly interface.

advancis

Physical & logical access. Managed as one.

Permission follow the person

AIM provisions access at onboarding, updates permissions when a role changes and revokes rights at offboarding. Vendor-neutral by design, it supports approval workflows, self-service requests and regular recertification processes. A clear audit trail keeps access aligned with policy and makes every decision traceable.

Integrate and Orchestrate

Connect identities from HR, ERP, Entra ID and visitor management with existing access control and IT systems. AIM-ready adapters help unify sites and keep physical and logical access consistent.

Your infrastructure stays in place, protecting existing investments as your organisation grows.
